

This holds a database for employees. There is a splash screen that checks to see if the initial employess need to be initalized as well as the databases You can select which department you want to look through. Clicking on the person in the list will show their details. You can then update or delete the user. Going to update opens a screen with the employers information that can be updated or you can add a new employee to the database there.

I was unable to get the navigation drawer to be functional and the list of employees in the selected department does not update unless you close out of the app and reopen it.
